

Your highly trained dog is the most important element to do the job. We can make your, and their, work safer and more efficient. WatchGas proudly presents our latest high-end product in fumigation and sampling, specifically designed for customs, police and other customers with trained dogs. Meet the WatchGas Sampling Backpacks.

In need of a faster and more efficient way to detect, for example, drugs? With the help of the WatchGas Sampling Backpack, it is now possible to save up to 72 hours when taking samples. Whereas previously it was feasible to test only 3% of containers, with the WatchGas Sampling Backpack it is possible to test as much as 20% in the same timeframe. Because of its light weighted and easily transportable features, your mobility will increase extremely. Furthermore, it will not be necessary anymore to send your dog into containers. Just push the probe in the container and take your needed sample.

With the set, which consists of two high-quality backpacks, thorough measurements can be held. With only ten minutes, such a measurement has been made. One bag contains the pump, the other contains six jars with sterile cotton wool.

The purpose of the Sampling Backpack is to take quick and safe samples of, for example, containers. The pump supplied with the backpack can pump up to fifty litres of air into the sample container in four minutes. This comes down to approximately 12 litres per minute. You can choose how many litres of sample air the pump will draw.

Key Features

- Delivers process savings of approximately 72 hours
- User-Friendly
- Process improving
- Extreme mobility
- Light-weighted
- Two hands-free

Application Examples

- Searching containers for drugs, money or whatever your dog is trained to find.
- Customs
- Police

BACKPACK SPECIFICATIONS

Size Remote	145x63x33mm
Backpack size	300x470x150mm
Weight	5300 g
Battery	12V 16Ah 192Wh
Measurement	Pump
Housing	Nylon PA12 (Remote)
IP-rating	IP41
Temperature	5-40 °Celsius
Standby time	3 weeks
Operation time	6 hours (with pump on)
